ElegantL^AT_EX Program

Version: 0.12

Date: June 5, 2026

Abstract

This documentation illustrates the usage of the ElegantPaper template. This template is based on the standard L^AT_EX article class, which is designed for working paper writing. With this template, you can get rid of all the worries about the format and merely focus on writing.

Keywords: ElegantL^AT_EX, Working Paper, Template

1 Introduction

This template is based on the standard L^AT_EX article class, hence the arguments of article class are acceptable (a4paper, 10pt and etc.). Alternative engines are pdfL^AT_EX and X_YL^AT_EX.

1.1 Global Options

Language mode option **lang** allows two alternative inputs, **lang=en** (default) for English or **lang=cn** for Chinese.

1.2 Bibliography

This template uses biblatex to generate the bibliography, the default citestyle and bibliography style are both `numeric`. Let's take a glance at the citation effect. [3] use data from a major peer-to-peer lending [2] marketplace in China to study whether female and male investors evaluate loan performance differently [1].

2 Math and Fonts

2.1 Math Fonts

This template defines a new option (`math`), with three options:

1. `math=cm` (default), use L^AT_EX default math font (recommended).
2. `math=newtx`, use `newtxmath` math font.
3. `math=mtpro2`, use `mtpro2` package.

Example equation:

$$\int_{\mathbb{R}^q} f(x, y) \, dy \tag{1}$$

3 FAQ

- 1). *How to remove the information of version?*

Please comment `\version{x.xx}`.

- 2). *How to remove the information of date?*

Please type in `\date{}`.

- 3). *How to add several authors?*

Use `\and` in `\author` and use `\\` to start a new line.

4 Acknowledgement

Thank the ElegantLaTeX community for maintaining this template.
