

Example University

Example 1. BAL_{1:1}^I vs. UNBAL_{1:8}^I

Entscheidung Nr. 34

Bewegen Sie die Maus auf das dunkelgraue Feld, um Ihre bevorzugte Auszahlungskombination auszuwählen.
Ziel: wenn Sie auf die rote Markierung klicken, können Sie Ihre Auswahl speichern.

September 2015	Oktober 2015	November 2015	Dezember 2015	Januar 2016	Februar 2016	März 2016	April 2016	Mai 2016	Juni 2016	Juli 2016	August 2016
25	16	16	16	16	16	16	16	16	16	16	16
3,42 €					8,70 €						

Entscheidung Nr. 39

Bewegen Sie die Maus auf das dunkelgraue Feld, um Ihre bevorzugte Auszahlungskombination auszuwählen.
Ziel: wenn Sie auf die rote Markierung klicken, können Sie Ihre Auswahl speichern.

September 2015	Oktober 2015	November 2015	Dezember 2015	Januar 2016	Februar 2016	März 2016	April 2016	Mai 2016	Juni 2016	Juli 2016	August 2016
22	16	16	16	16	16	16	16	16	16	16	16
3,42 €	1,09 €	1,09 €	1,09 €	1,09 €	1,09 €	1,09 €	1,09 €	1,09 €	1,09 €	1,09 €	1,09 €

Example 2. BAL_{1:1}^{II} vs. UNBAL_{8:1}^{II}

Entscheidung Nr. 32

Bewegen Sie die Maus auf das dunkelgraue Feld, um Ihre bevorzugte Auszahlungskombination auszuwählen.
Ziel: wenn Sie auf die rote Markierung klicken, können Sie Ihre Auswahl speichern.

September 2015	Oktober 2015	November 2015	Dezember 2015	Januar 2016	Februar 2016	März 2016	April 2016	Mai 2016	Juni 2016	Juli 2016	August 2016
25	16	16	16	16	16	16	16	16	16	16	16
				3,20 €							8,55 €

Entscheidung Nr. 25

Bewegen Sie die Maus auf das dunkelgraue Feld, um Ihre bevorzugte Auszahlungskombination auszuwählen.
Ziel: wenn Sie auf die rote Markierung klicken, können Sie Ihre Auswahl speichern.

September 2015	Oktober 2015	November 2015	Dezember 2015	Januar 2016	Februar 2016	März 2016	April 2016	Mai 2016	Juni 2016	Juli 2016	August 2016
23	16	16	16	16	16	16	16	16	16	16	16
				0,40 €	0,40 €	0,40 €	0,40 €	0,40 €	0,40 €	0,40 €	8,55 €

Recommendation:
Place figures and tables at the top of the poster.

You will be primarily talking about your figures and tables.
Hence, these are the most important elements of your poster.

Placing them at the top puts them at eye level.
The body text is largely supplementary and can thus
be placed in the bottom half.

	OLS			Tobit
	Lower bound (1)	Midpoint (2)	Upper bound (3)	(4)
$\tilde{d}$ in MAIN-TREATMENT	31.640*** (2.685)	37.610*** (3.575)	43.580*** (4.683)	37.094*** (3.658)
$\tilde{d}^{rel}$ in MAIN-TREATMENT	0.190*** (0.016)	0.224*** (0.021)	0.259*** (0.027)	
Observations	100	100	100	100

Notes: This table presents estimates of the average absolute and relative measure of concentration bias, $\tilde{d}$ and $\tilde{d}^{rel}$, respectively. Robust standard errors in parentheses. Sample includes all observations from MAIN-TREATMENT. * $p < 0.1$, ** $p < 0.05$, *** $p < 0.01$.

Comparison average effect, present and future bias

A bar chart comparing the Concentration Bias Effect Size for three categories: Average effect, Present bias, and Future bias. The y-axis is labeled 'Concentration Bias Effect Size' and ranges from 0 to 0.1 in increments of 0.02. The x-axis has three labels: 'Average effect', 'Present bias', and 'Future bias'. The bars are blue. The 'Average effect' bar has a value of approximately 0.062. The 'Present bias' bar has a value of approximately 0.058. The 'Future bias' bar has a value of approximately 0.067. Each bar has a vertical error bar extending above and below the top of the bar.

Category	Concentration Bias Effect Size (approx.)
Average effect	0.062
Present bias	0.058
Future bias	0.067

Align elements both horizontally and vertically!

We define various lengths and commands to facilitate both horizontal and vertical alignment of all elements.

\leftmargin Horizontal position of the left border of the left-most text column: `40.5mm` by default.

\rightmargin Horizontal position of the right border of the right-most text column: **40.5mm** by default.

`\numcols` Number of columns on poster: 3 by default
(increase to 4 or 5 for poster in landscape orientation).

\colsep Space between columns (so-called “gutter”):
15.5mm by default.

\colwidth Column width: paper width (841 mm for A0 portrait) minus margins (2×40.5 mm) minus gutters (2×15.5 mm), by default 243 mm.

Test citations: Lisi (1995), Kőszegi and Szeidl (2013).

Widths and positions of elements spanning one column or multiple columns

Placement of *all* elements is done via the `textblock*` environment which takes two arguments: width in `{}` and (x,y)-position of the upper left corner in `()`.

Width values (Dertwinkel-Kalt et al. 2022):

- 1-column box: `\colwidth`.
- 2-column box: `2\colwidth + \colsep`.
- 3-column box: `3\colwidth + 2\colsep`.

Vertical alignment

\blockOne Vertical position of upper border of first figure or block of text: **19.50cm** by default.

\blockTwo Vertical position of upper border of second figure or block of text: **48.25cm** in this document.

\blockThree Vertical position of upper border of third figure or block of text.

Math test

$\epsilon\theta\upsilon\kappa\chi\pi\omega\rho\rho\varsigma\zeta\phi\Theta$; $\epsilon\theta\upsilon\kappa\chi\pi\omega\rho\rho\varsigma\zeta\phi\Theta$;
 $\epsilon\theta\upsilon\kappa\chi\pi\omega\rho\rho\varsigma\zeta\phi\Theta$; $\epsilon\theta\upsilon\kappa\chi\pi\omega\rho\rho\varsigma\zeta\phi\Theta$.

$$\hat{\beta} = (X'X)^{-1}X'y; \varepsilon \sim N(0, \sigma_\varepsilon); \partial u(c)/\partial \rho = c^{-\rho}; n \in \mathbb{N}_0.$$

$$\begin{aligned} \mathbb{E}[X|\mathcal{R}] &:= \int_{-\infty}^{\infty} x f(x|\mathcal{R}) \, dx \rightarrow \max_{\mathcal{R}}. \\ \mathbb{E}[X] &= \frac{1}{N} \cdot \sum_{i=1}^N x_i \Pr(x_i). \end{aligned}$$

Horizontal (x) values (Dohmen et al. 2012):

- Box starting in column 1: `\leftmargin.`
- Box starting in column 2:
`\leftmargin + \colwidth + \colsep.`
- Box starting in column 3:
`\leftmargin + 2\colwidth + 2\colsep.`

Vertical (y) values:

- \blockOne,
- \blockTwo, etc.

Body text

- Use `\begin{parblock} ... \end{parblock}` for body text as the inner environment.
- As any other element, enclose this inner environment in `\begin{textblock*} ... \end{textblock*}`.

1 Text font: Charter. This font is provided via the `XCharter` package, with the mathematical symbols provided by the `mathdesign` package. Bierbrauer, Tsyvinski, and Werquin (2022).
